MOLDED GRATINGS

Mesh	**mm 100 x 30**	Clear span	**mm 92 x 22**	
Height	**mm 38**	
Bearing bar thickness	**mm 8** upper part	
	mm 7 bottom part	
Color	**Translucent green**	

Raw materials	***ISOPHTALIC Polyester Resin***
	Roving glass fiber type "E"
	Without inorganic fillers

Resin type	***Modulus of elasticity***	***Ultimate stress***
ISO	12250 MPa	310 MPa

Standard panels		mm 1200 x 3000		
Weight kg/m² 18		
tolerance	± mm 5 panel dimensions	
	± mm 2 height	

Surface	S	**Smooth**	***Antiskid level R10 V10 norm DIN 51130***
	M	**Meniscus**	***Antiskid level R13 V10 norm DIN 51130***
	A	**Quartz**	***Antiskid level R13 V10 norm DIN 51130***

Ageing resistance	**Ageing test made with UV lamp according to ASTM G154-06 and passed with 5 points on the gray range and without evident defects** (test made with 1500 hours of exposure to 4 hours alternate cycles at a UV temperature of 60°C and 4 hours at a condensed temperature of 50°C irradiated by UVB 313 nm lamp, radiance 0,71 W/m²)
	After the exposure to heat, cold and humidity cycles according to UNI EN ISO 9142/04 norm (n° 21 cycles type D3) there is no evidence of defects

LOADS

MAXIMUM SUGGESTED LOADS

Type of support	**On the line of the two ends of the panel**

Limits determined by	**Deflection** (load sagging)

the **maximum deflection admitted,** is 1/200 of the distance between the supports

According to the standard DIN 24537-3 deviation due to the load may be no more than 1/200 of the land width and the difference in height between neighbouring joints between loaded and unloaded floor coverings may be no more than 4 mm.

DISTRIBUTED LOAD			**CONCENTRATED LOAD**		
Distance between supports	Load with deflection equal to 1/200	Load with deflection equal to 1/100	Distance between supports	Load with deflection equal to 1/200	Load with deflection equal to 1/100
[cm]	[kg/m²]		[cm]	[kg/m]	
50	4350	8750	50	1350	2700
70	1550	3150	70	650	1350
90	750	1500	90	400	800
110	400	800	110	250	550

All lighter loads are admitted

Limits determined by	**Admitted stresses** (stress determined by the load)

the **maximum admitted stress** is 1/5 of the ultimate stress
(safety factor is equal to 0.20 – the ultimate stress is 5 times the specified load)

DISTRIBUTED LOAD		**CONCENTRATED LOAD**	Distance between supports	Maximum admitted load	Distance between supports	Maximum admitted load
[cm]	[kg/m²]	[cm]	[kg/m]
50	11850	50	2950
70	6050	70	2100
90	3650	90	1650
110	2450	110	1350

All lighter loads are admitted

- The above characteristics are meant as reference values for standard material in ambient working temperature. Even if they are not to be considered as guaranteed characteristics they are based on our experience and are supplied in good faith.
- According to the standard DIN 24537-3 the conversion safety factor should be 0.75 for internal environmental exposure conditions, 0.65 for external exposure conditions, and 0.50 for aggressive exposure conditions.
- No matter which are the exposure conditions, chemical resistance must be always verified by contacting M.M. technical department.
- In case of heavy duty load compressive strength must be verified.
