SCH 40/30_VIN 06.05.2011 - Rev. 4

MOLDED GRATINGS

Mesh	mm	40 x	k 40
Clear span	mm	33 x	x 33
Height	mm	30	
Bearing bar	mm	7	upper part
thickness	mm	5	bottom part
Color	Natural Translucent		

	Vinylester Resin
Raw materials	Roving glass fiber type "ECR"
	Without inorganic fillers

Resin type	Modulus of elasticity	Ultimate stress
VIN	12250 MPa	310 MPa

Stand	dard panels	Sh- / A
mm	1000 x 2000	HURE SITE SIGN
mm	1200 x 3000	
Weig	ht kg/m² 12	
tolerance	± mm 5 panel dimensions ± mm 2 height	

	S	Smooth	Antiskid level R10 V10 norm DIN 51130
Surface	Μ	Meniscus	Antiskid level R13 V10 norm DIN 51130
	А	Quartz	Antiskid level R13 V10 norm DIN 51130

Ageing resistance	Ageing test made with UV lamp according to ASTM G154-06 and passed with 5 points on the gray range and without evident defects (test made with 1500 hours of exposure to 4 hours alternate cycles at a UV temperature of 60°C and 4 hours at a condensed temperature of 50°C irradiated by UVB 313 nm lamp, radiance 0,71 W/m ²)
	After the exposure to heat, cold and humidity cycles according to UNI EN ISO 9142/04 norm (n° 21 cycles type D3) there is no evidence of defects

LOADS

MAXIMUM SUGGESTED LOADS

Type of support	On the line of the two ends of the panel
Limits determined by	Deflection (load sagging)

the **maximum deflection admitted**, is 1/200 of the distance between the supports According to the standard DIN 24537-3 deviation due to the load may be no more than 1/200 of the land width and the difference in height between neighbouring joints between loaded and unloaded floor coverings may be no more than 4 mm.

DISTRIBUTED LOAD	and the second sec	
		1
Distance between	Load with	Load with
supports	deflection equal	deflection equal
	to 1/200	to 1/100
[cm]	[kg/m ²]	
50	1300	2600
70	450	950
90	200	400
110	100	200

Limits determined by

CONCENTRATED LOAD			
Distance between	Load with	Load with	
supports	deflection equal to 1/200	deflection equal to 1/100	
[cm]	[kg/m]		
50	400	800	
70	200	400	
90	100	250	
110	50	150	

All lighter loads are admitted

Admitted stresses (stress determined by the load)

the **maximum admitted stress** is 1/5 of the ultimate stress (safety factor is equal to 0.20 – the ultimate stress is 5 times the specified load)

DISTRIBUTED LOAD	and the second s	CONCENTRATED LOAD	
Distance between supports	Maximum admitted load	Distance between supports	Maximum admitted load
[cm]	[kg/m ²]	[cm]	[kg/m]
50	4350	50	1050
70	2200	70	750
90	1300	90	600
110	900	110	450

All lighter loads are admitted

 The above characteristics are meant as reference values for standard material in ambient working temperature. Even if they are not to be considered as guaranteed characteristics they are based on our experience and are supplied in good faith.

- According to the standard DIN 24537-3 the conversion safety factor should be 0.75 for internal environmental exposure conditions, 0.65 for external exposure conditions, and 0.50 for aggressive exposure conditions.

- No matter which are the exposure conditions, chemical resistance must be always verified by contacting M.M.technical department.

- In case of heavy duty load compressive strength must be verified.
