### SCH 68/50\_VIN

06.05.2011 - Rev. 4

### **MOLDED GRATINGS**

Mesh	mm 100 x 68		
Clear span	mm 92 x 60		
Height	mm 50		
Bearing bar	mm 8 upper part		
thickness	mm 7 bottom part		
Color	Natural translucent		

	Vinylester Resin
Raw materials	Roving glass fiber type "ECR"
	Without inorganic fillers

Resin type	Modulus of elasticity	Ultimate stress
VIN	12250 MPa	310 MPa

Stano	lard panels	
mm	1100 x 2200	SOF.
Weigh	nt kg/m² 15	
tolerance	± mm 5 panel dimensions	
	± mm 2 height	

	S	Smooth	Antiskid level R10 V10 norm DIN 51130
Surface	М	Meniscus	Antiskid level R13 V10 norm DIN 51130
	Α	Quartz	Antiskid level R13 V10 norm DIN 51130

# Ageing resistance

Ageing test made with UV lamp according to ASTM G154-06 and passed with 5 points on the gray range and without evident defects (test made with 1500 hours of exposure to 4 hours alternate cycles at a UV temperature of 60°C and 4 hours at a condensed temperature of 50°C irradiated by UVB 313 nm lamp, radiance 0,71 W/m²)

After the exposure to heat, cold and humidity cycles according to UNI EN ISO 9142/04 norm (n° 21 cycles type D3) there is no evidence of defects

# M.M. S.R.L. Fiberglass Reinforced Polymer gratings and structures

Via Antonio Zanussi, 300/302 33100 Udine - Italy Cap. Soc. EURO 100.000 i.v. P.Iva / C.F. 00477620306 Reg. Imp. UD 00477620306 R.E.A. UD-138461 ph. +39.0432.522970 fax +39.0432.522253 info@mmgrigliati.it

### **LOADS**

#### MAXIMUM SUGGESTED LOADS

Type of support	On the line of the two ends of the panel

Limits determined by **Deflection** (load sagging)

the maximum deflection admitted, is 1/200 of the distance between the supports

According to the standard DIN 24537-3 deviation due to the load may be no more than 1/200 of the land width and the difference in height between neighbouring joints between loaded and unloaded floor coverings may be no more than 4 mm.

DISTRIBUTED LOAD			CONCENTRATED LOAD		
Distance between supports	Load with deflection equal	Load with	Distance between supports	Load with deflection equal	Load with deflection equal
03.ppo.10	to 1/200	to 1/100		to 1/200	to 1/100
[cm]	[kg	l deflection equal	[cm]	[kg	/m]
70	1600	3200	70	700	1400
90	750	1500	90	400	800
110	400	800	110	250	550
130	250	500	130	200	400

All lighter loads are admitted

## Limits determined by Admitted stresses (stress determined by the load)

the **maximum admitted stress** is 1/5 of the ultimate stress (safety factor is equal to 0.20 – the ultimate stress is 5 times the specified load)

DISTRIBUTED LOAD		CONCENTRATED LOAD	
Distance between supports	Maximum admitted load	Distance between supports	Maximum admitted load
[cm]	[kg/m²]	[cm]	[kg/m]
70	4600	70	1600
90	2800	90	1250
110	1850	110	1000
130	1300	130	850

- The above characteristics are meant as reference values for standard material in ambient working temperature. Even if they are not to be considered as guaranteed characteristics they are based on our experience and are supplied in good faith.
- According to the standard DIN 24537-3 the conversion safety factor should be 0.75 for internal environmental exposure conditions, 0.65 for external exposure conditions, and 0.50 for aggressive exposure conditions.
- No matter which are the exposure conditions, chemical resistance must be always verified by contacting M.M.technical department.
- In case of heavy duty load compressive strength must be verified.
