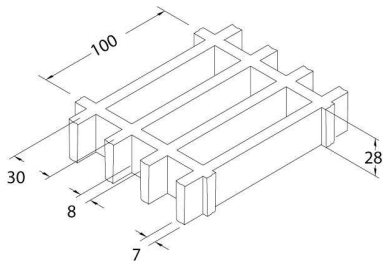
06.05.2011 - Rev. 4

MOLDED GRATINGS

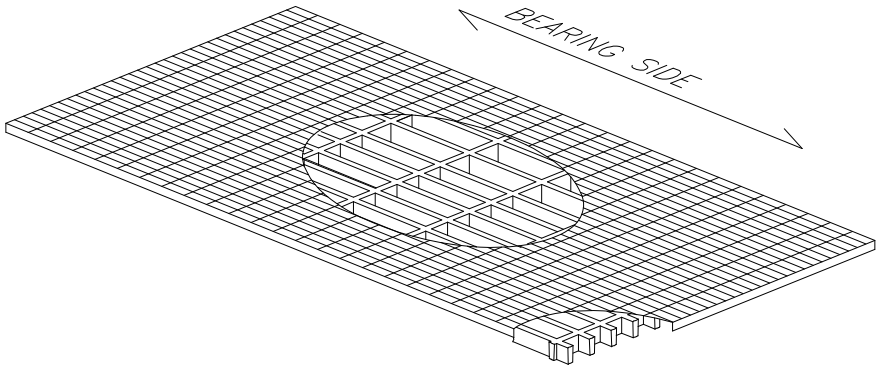
Mesh	mm 100 x 30	
Clear span	mm 92 x 22	
Height	mm 28	
Bearing bar thickness	mm 8 upper part	
	mm 7 bottom part	
Color	Black	



Raw materials	*Polyester resin*
	Roving glass fiber type "E"
	Inorganic fillers without halogens + Carbon black conductive powder

Resin type	*Modulus of elasticity*	*Ultimate stress*
CFR	15000 MPa	325 MPa

Standard panels	
mm 1000 x 2000	
mm 1500 x 2000	
Weight kg/m² 13	
tolerance ± mm 5 panel dimensions	
tolerance ± mm 2 height	



Surface	M	Meniscus	*Antiskid level R13 V10 norm DIN 51130*

Reaction to fire	*Fire retardant*	Spread ≤ 25 norm ASTM E84-98
		ASTM D635 Elapsed time and burned length < 25 mm

Surface and Volume electrical resistivity. Dielectric strength	*Excellent Conductivity*	EN 61340-2.3 Par. 8.1 and 8.2 – IEC 61340-4.1 Par. 5.1.2 ref. ISO 1957 – IEC 61340-4.5 - ASTM D149-97a

LOADS

MAXIMUM SUGGESTED LOADS

Type of support	**On the line of the two ends of the panel**

Limits determined by	**Deflection** (load sagging)

the **maximum deflection admitted,** is 1/200 of the distance between the supports

According to the standard DIN 24537-3 deviation due to the load may be no more than 1/200 of the land width and the difference in height between neighbouring joints between loaded and unloaded floor coverings may be no more than 4 mm.

DISTRIBUTED LOAD			**CONCENTRATED LOAD**		
Distance between supports	Load with deflection equal to 1/200	Load with deflection equal to 1/100	Distance between supports	Load with deflection equal to 1/200	Load with deflection equal to 1/100
[cm]	[kg/m²]		[cm]	[cm]	
50	2100	4250	50	650	1300
70	750	1550	70	300	650
90	350	700	90	200	400
110	200	400	110	100	250

All lighter loads are admitted

Limits determined by	**Admitted stresses** (stress determined by the load)

the **maximum admitted stress** is 1/5 of the ultimate stress
(safety factor is equal to 0.20 – the ultimate stress is 5 times the specified load)

DISTRIBUTED LOAD		**CONCENTRATED LOAD**	Distance between supports	Maximum admitted load	Distance between supports	Maximum admitted load
[cm]	[kg/m²]	[cm]	[kg/m]
50	6750	50	1650
70	3400	70	1200
90	2050	90	900
110	1350	110	750

All lighter loads are admitted

- The above characteristics are meant as reference values for standard material in ambient working temperature. Even if they are not to be considered as guaranteed characteristics they are based on our experience and are supplied in good faith.
- According to the standard DIN 24537-3 the conversion safety factor should be 0.75 for internal environmental exposure conditions, 0.65 for external exposure conditions, and 0.50 for aggressive exposure conditions.
- No matter which are the exposure conditions, chemical resistance must be always verified by contacting M.M. technical department.
- In case of heavy duty load compressive strength must be verified.
