MOLDED GRATINGS

Mesh	mm	38 x 38	Thickness	mm	33	
Cover thickness	mm	3	
Bearing bar thickness	mm	7 upper part	
	mm	5 bottom part	
Color	Black		

Raw materials	*Polyester Resin*
	Roving glass fiber + Mat and Woven Fabric type"E"
	Inorganic fillers without halogens + Carbon black conductive powder

Resin type	*Modulus of elasticity*	*Ultimate stress*
CFR	15000 MPa	250 MPa

Standard panels		mm 1000 x 2000		
mm 1000 x 4038		
mm 1220 x 3660		
Weight kg/m² 23		
tolerance	± mm 5 panel dimensions	
	± mm 2 height	

Surface	A	Quartz	*Antiskid level R13 V4 norm DIN 51130*

Reaction to fire	*Fire retardant*	Spread ≤ 25 norm ASTM E84-98
		ASTM D635 Elapsed time and burned length < 25 mm

Surface and Volume electrical resistivity. Dielectric strength	*Excellent Conductivity*	EN 61340-2.3 Par. 8.1 and 8.2 – IEC 61340-4.1 Par. 5.1.2 ref. ISO 1957 – IEC 61340-4.5 - ASTM D149-97a

LOADS

MAXIMUM SUGGESTED LOADS

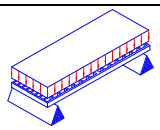
Type of support	**On the line of the two ends of the panel**

Limits determined by	**Deflection** (load sagging)

the **maximum deflection admitted,** is 1/200 of the distance between the supports

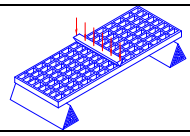
According to the standard DIN 24537-3 deviation due to the load may be no more than 1/200 of the land width and the difference in height between neighbouring joints between loaded and unloaded floor coverings may be no more than 4 mm.

DISTRIBUTED LOAD



Distance between supports [cm]	Load with deflection equal to 1/200 [kg/m²]	Load with deflection equal to 1/100 [kg/m²]
50	4050	8100
70	1450	2950
90	650	1350
110	350	750

CONCENTRATED LOAD



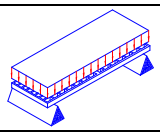
Distance between supports [cm]	Load with deflection equal to 1/200 [cm]	Load with deflection equal to 1/100 [cm]
50	1250	2500
70	600	1250
90	350	750
110	250	500

All lighter loads are admitted

Limits determined by	**Admitted stresses** (stress determined by the load)

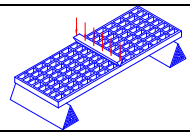
the **maximum admitted stress** is 1/5 of the ultimate stress
(safety factor is equal to 0.20 – the ultimate stress is 5 times the specified load)

DISTRIBUTED LOAD



Distance between supports [cm]	Maximum admitted load [kg/m²]
50	6550
70	3350
90	2000
110	1350

CONCENTRATED LOAD



Distance between supports [cm]	Maximum admitted load [kg/m]
50	1600
70	1150
90	900
110	700

All lighter loads are admitted

- The above characteristics are meant as reference values for standard material in ambient working temperature. Even if they are not to be considered as guaranteed characteristics they are based on our experience and are supplied in good faith.
- According to the standard DIN 24537-3 the conversion safety factor should be 0.75 for internal environmental exposure conditions, 0.65 for external exposure conditions, and 0.50 for aggressive exposure conditions.
- No matter which are the exposure conditions, chemical resistance must be always verified by contacting M.M.technical department.
- In case of heavy duty load compressive strength must be verified.
