## SCH 38/38DC\_IFR

06.05.2011 - Rev. 4

# **MOLDED GRATINGS**

Mesh	mm	38 >	<b>c</b> 38
Thickness	mm	44	
Cover thickness	mm	3	upper cover
Cover unickness	mm	3	bottom cover
Bearing bar	mm	7	upper part
thickness	mm	5	bottom part
Color	Grey		<b>7004</b> ive RAL reference

	Polyester Resin
Raw materials Roving glass fiber + Mat and Woven Fabric type"E"	
	Inorganic fillers without halogens

Resin type	Modulus of elasticity	Ultimate stress
IFR	15000 MPa	130 MPa

Stand	dard panels	
mm	1000 x 1800	Signature Signat
mm	1000 x 3660	The same star
mm	1220 x 3660	
Weigl	ht kg/m² 30	
tolerance	± mm 5 panel dimensions ± mm 2 height	

Surface	Α	Quartz	Antiskid level R13 V4 norm DIN 51130		
Depotion to five	o fire Fire retardant		Spread ≤ 25 norm ASTM E84-98		
Reaction to fire			Level B <sub>ff</sub> -S1 norm EN 13501-1		
Ageing resistance	gı	ray range and withou ernate cycles at a UV to	I lamp according to ASTM G154-06 and passed with 5 points on the lat evident defects (test made with 1500 hours of exposure to 4 hours emperature of 60°C and 4 hours at a condensed temperature of 50°C diated by UVB 313 nm lamp, radiance 0,71 W/m²)		
	After the exposure to heat, cold and humidity cycles according to UNI EN ISO 9142/04 norm (n° 21 cycles type D3) there is no evidence of defects				

M.M. S.R.L.
Fiberglass Reinforced Polymer
gratings and structures

### **LOADS**

#### MAXIMUM SUGGESTED LOADS

Type of support On the line of the two ends of the panel
--

Limits determined by **Deflection** (load sagging)

the maximum deflection admitted, is 1/200 of the distance between the supports

According to the standard DIN 24537-3 deviation due to the load may be no more than 1/200 of the land width and the difference in height between neighbouring joints between loaded and unloaded floor coverings may be no more than 4 mm.

DISTRIBUTED LOAD			CONCENTRATED			
Distance between supports	Load with deflection equal to 1/200	Load with deflection equal to 1/100	Distance between supports	Load with deflection equal to 1/200	Load with deflection equal to 1/100	
[cm]	[kg/m²]		[cm]	[cm]		
50	15350	30700	50	4750	9550	
70	5550	11150	70	2400	4850	
90	2600	5250	90	1450	2950	
110	1400	2850	110	950	1950	

All lighter loads are admitted

## Limits determined by Admitted stresses (stress determined by the load)

the **maximum admitted stress** is 1/5 of the ultimate stress (safety factor is equal to 0.20 – the ultimate stress is 5 times the specified load)

DISTRIBUTED LOAD		CONCENTRATED LOAD	
Distance between supports	Maximum admitted load	Distance between supports	Maximum admitted load
[cm]	[kg/m²]	[cm]	[kg/m]
50	12600	50	3150
70	6400	70	2250
90	3850	90	1750
110	2600	110	1400

- The above characteristics are meant as reference values for standard material in ambient working temperature. Even if they are not to be considered as guaranteed characteristics they are based on our experience and are supplied in good faith.
- According to the standard DIN 24537-3 the conversion safety factor should be 0.75 for internal environmental exposure conditions, 0.65 for external exposure conditions, and 0.50 for aggressive exposure conditions.
- No matter which are the exposure conditions, chemical resistance must be always verified by contacting M.M.technical department.
- In case of heavy duty load compressive strength must be verified.
