## SCH 38/38\_IFR

06.05.2011 - Rev. 4

# **MOLDED GRATINGS**

Mesh	mm 38 x 38
Clear span	mm 31 x 31
Height	mm 38
Bearing bar	mm 7 upper part
thickness	mm 5 bottom part
Color	Grey RAL 7004 indicative RAL reference

	Polyester Resin
Raw materials	Roving glass fiber type"E"
	Inorganic fillers without halogens

Resin type	Modulus of elasticity	Ultimate stress
IFR	15000 MPa	325 MPa

Standard pa	anels	7
mm 1000 x	2000	Story Story
mm 1000 x	3000	TEAPAC SOF
mm 1000 x	4038	
mm 1220 x	3660	
mm 1220 x	4038	
Weight kg/	m² 18	
tolerance dime	n 5 panel ensions n 2 height	

	Ø	Smooth	Antiskid level R10 V10 norm DIN 51130
Surface	М	Meniscus	Antiskid level R13 V10 norm DIN 51130
	Α	Quartz	Antiskid level R13 V10 norm DIN 51130

Position to fire	Reaction to fire Fire retardant	Spread ≤ 25 norm ASTM E84-98
Reaction to life		Level B <sub>ff</sub> -S1 norm EN 13501-1

# Ageing resistance

Ageing test made with UV lamp according to ASTM G154-06 and passed with 5 points on the gray range and without evident defects (test made with 1500 hours of exposure to 4 hours alternate cycles at a UV temperature of 60°C and 4 hours at a condensed temperature of 50°C irradiated by UVB 313 nm lamp, radiance 0,71 W/m²)

After the exposure to heat, cold and humidity cycles according to UNI EN ISO 9142/04 norm (n° 21 cycles type D3) there is no evidence of defects

### **LOADS**

#### MAXIMUM SUGGESTED LOADS

Type of support On the line of the two ends of the panel
--

Limits determined by **Deflection** (load sagging)

the maximum deflection admitted, is 1/200 of the distance between the supports

According to the standard DIN 24537-3 deviation due to the load may be no more than 1/200 of the land width and the difference in height between neighbouring joints between loaded and unloaded floor coverings may be no more than 4 mm.

DISTRIBUTED LOAD			CONCENTRATED			
Distance between supports	Load with deflection equal to 1/200	Load with deflection equal to 1/100	Distance between supports	Load with deflection equal to 1/200	Load with deflection equal to 1/100	
[cm]	[kg/m²]		[cm]	[cm]		
50	3350	6750	50	1050	2100	
70	1200	2450	70	500	1050	
90	550	1150	90	300	650	
110	300	600	110	200	400	

#### All lighter loads are admitted

## Limits determined by Admitted stresses (stress determined by the load)

the **maximum admitted stress** is 1/5 of the ultimate stress (safety factor is equal to 0.20 – the ultimate stress is 5 times the specified load)

DISTRIBUTED LOAD		CONCENTRATED LOAD	
Distance between supports	Maximum admitted load	Distance between supports	Maximum admitted load
[cm]	[kg/m²]	[cm]	[kg/m]
50	7600	50	1900
70	3850	70	1350
90	2300	90	1050
110	1550	110	850

- The above characteristics are meant as reference values for standard material in ambient working temperature. Even if they are not to be considered as guaranteed characteristics they are based on our experience and are supplied in good faith.
- According to the standard DIN 24537-3 the conversion safety factor should be 0.75 for internal environmental exposure conditions, 0.65 for external exposure conditions, and 0.50 for aggressive exposure conditions.
- No matter which are the exposure conditions, chemical resistance must be always verified by contacting M.M.technical department.
- In case of heavy duty load compressive strength must be verified.
