MOLDED GRATINGS

Mesh	mm 38 x 38
Clear span	mm 31 x 31
Height	mm 38
Bearing bar	mm 7 upper part
thickness	mm 5 bottom part
Color	Black

	Polyester Resin
Raw materials	Roving glass fiber type "E"
	Inorganic fillers without halogens + Carbon black conductive powder

Resin type	Modulus of elasticity	Ultimate stress
CFR	15000 MPa	325 MPa

Standard panels	
mm 1000 x 2000	## Park Sing
mm 1000 x 3000	The state of the s
mm 1000 x 4038	
mm 1220 x 3660	
mm 1220 x 4038	
Weight kg/m ² 18	
tolerance ± mm 5 panel dimensions ± mm 2 height	

Surface	М	Meniscus	Antiskid level R13 V10 norm DIN 51130
Decelou to fine		Fine meternet	Spread ≤ 25 norm ASTM E84-98
Reaction to fire	Fire retardant		ASTM D635 Elapsed time and burned length < 25 mm
Surface and Valuma			

Surface and Volume	
electrical resistivity.	
Dielectric strength	
_	

Excellent Conductivity

EN 61340-2.3 Par. 8.1 and 8.2 – IEC 61340-4.1 Par. 5.1.2 ref. ISO 1957 – IEC 61340-4.5 - ASTM D149-97a

LOADS

MAXIMUM SUGGESTED LOADS

Type of support On the line of the two ends of the panel
--

Limits determined by **Deflection** (load sagging)

the maximum deflection admitted, is 1/200 of the distance between the supports

According to the standard DIN 24537-3 deviation due to the load may be no more than 1/200 of the land width and the difference in height between neighbouring joints between loaded and unloaded floor coverings may be no more than 4 mm.

DISTRIBUTED LOAD			CONCENTRATED LOAD		
Distance between supports	Load with deflection equal to 1/200	Load with deflection equal to 1/100	Distance between supports	Load with deflection equal to 1/200	Load with deflection equal to 1/100
[cm]	[kg/m²]		[cm]	[kg	ı/m]
50	3350	6750	50	1050	2100
70	1200	2450	70	500	1050
90	550	1150	90	300	650
110	300	600	110	200	400

All lighter loads are admitted

Limits determined by	Admitted stresses	(stress determined by the load)

the maximum admitted stress is 1/5 of the ultimate stress

(safety factor is equal to 0.20 – the ultimate stress is 5 times the specified load)

DISTRIBUTED LOAD		CONCENTRATED LOAD	
Distance between supports	Maximum admitted load	Distance between supports	Maximum admitted load
[cm]	[kg/m²]	[cm]	[kg/m]
50	7600	50	1900
70	3850	70	1350
90	2300	90	1050
110	1550	110	850

- The above characteristics are meant as reference values for standard material in ambient working temperature. Even if they are not to be considered as guaranteed characteristics they are based on our experience and are supplied in good faith.
- According to the standard DIN 24537-3 the conversion safety factor should be 0.75 for internal environmental exposure conditions, 0.65 for external exposure conditions, and 0.50 for aggressive exposure conditions.
- No matter which are the exposure conditions, chemical resistance must be always verified by contacting M.M.technical department.
- In case of heavy duty load compressive strength must be verified.
