## SCH 50/50DC\_CFR

06.05.2011 - Rev. 4

# **MOLDED GRATINGS**

Mesh	mm 50 x 50
Thickness	mm 56
Cover thickness	mm 3 upper cover
Cover unichitess	mm 3 bottom cover
Bearing bar	mm 8 upper part
thickness	mm 5 bottom part
Color	Black

	Polyester Resin		
Raw materials	Roving glass fiber + Mat and Woven Fabric type"E"		
	Inorganic fillers without halogens + Carbon black conductive powder		

Resin type	Modulus of elasticity	Ultimate stress
CFR	15000 MPa	130 MPa

Stand	dard panels	
mm	1220 x 3660	BEARING SEC
Weigh	t kg/m² 35,5	
tolerance	± mm 5 panel dimensions	
tolerance		

Surface	Surface A Quartz Antiskid le		Antiskid level R13 V4 norm DIN 51130	
Desetion to five	Fire retardant			Spread ≤ 25 norm ASTM E84-98
Reaction to fire			ASTM D635 Elapsed time and burned length < 25 mm	
Surface and Volume electrical resistivity.  Dielectric strength		EN 613	40-2.3 Par. 8.1 and 8.2 – IEC 61340-4.1 Par. 5.1.2 ref. ISO 1957 – IEC 61340-4.5 - ASTM D149-97a	

# M.M. S.R.L. Fiberglass Reinforced Polymer gratings and structures

#### **LOADS**

#### MAXIMUM SUGGESTED LOADS

Type of support	On the line of the two ends of the panel

Limits determined by **Deflection** (load sagging)

the maximum deflection admitted, is 1/200 of the distance between the supports

According to the standard DIN 24537-3 deviation due to the load may be no more than 1/200 of the land width and the difference in height between neighbouring joints between loaded and unloaded floor coverings may be no more than 4 mm.

DISTRIBUTED LOAD			CONCENTRATED LOAD		
Distance between supports	Load with deflection equal	Load with deflection equal	Distance between supports	Load with deflection equal to 1/200	Load with deflection equal to 1/100
[cm]		ction equal of 1/200         deflection equal to 1/100           9800         19650           4600         9200           2500         5050	[cm]	[kg/m]	
70	9800	19650	70	4250	8550
90	4600	9200	90	2600	5200
110	2500	5050	110	1700	3450
130	1500	3050	130	1200	2450

All lighter loads are admitted

### Limits determined by Admitted stresses (stress determined by the load)

the **maximum admitted stress** is 1/5 of the ultimate stress (safety factor is equal to 0.20 – the ultimate stress is 5 times the specified load)

DISTRIBUTED LOAD		CONCENTRATED LOAD		
Distance between supports	Maximum admitted load	Distance between supports	Maximum admitted load	
[cm]	[kg/m²]	[cm]	[kg/m]	
70	8850	70	3100	
90	5350	90	2400	
110	3550	110	1950	
130	2550	130	1650	

- The above characteristics are meant as reference values for standard material in ambient working temperature. Even if they are not to be considered as guaranteed characteristics they are based on our experience and are supplied in good faith.
- According to the standard DIN 24537-3 the conversion safety factor should be 0.75 for internal environmental exposure conditions, 0.65 for external exposure conditions, and 0.50 for aggressive exposure conditions.
- No matter which are the exposure conditions, chemical resistance must be always verified by contacting M.M.technical department.
- In case of heavy duty load compressive strength must be verified.
