

CYCLE TRACK GANGWAY

LOCATION

Cycle track in Vicenza province located alongside an overpass.

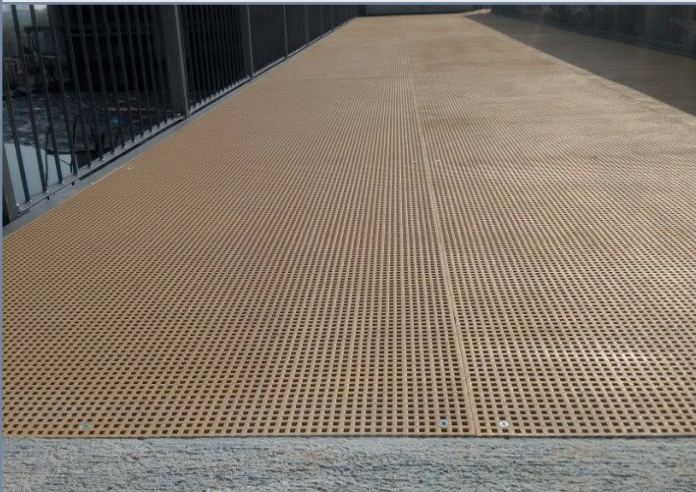

CLIENT

Metal carpenter company experienced both in civil and industrial branches.

LOCATION VICENZA

USE CYCLE TRACK FLOORING

PRODUCT MDK 1230, SCH12/30 _ IFR Q-PAINT FINISHING

OBJECTIVE

The buyer was seeking for a light product to use for the flooring of a cycle track. It had to replace the old worn-out and slippery wood flooring.

SOLUTION

M.M. has supplied a grating type SCH12/30_IFR with Q-PAINT surface finishing that is suitable for walking bare foot (according to 51097 norm), that was fixed on a metal structure of the overpass.

The purpose was to build a resistant light weight structure and the propensity to use FRP products was improved by the fact that maintenance was not required because of the resistance of FRP to atmospheric agents.
