

SCH 38/38C_CFR

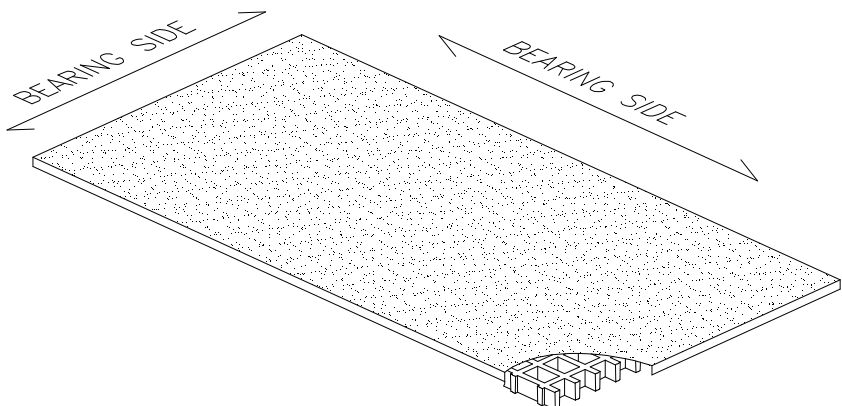

06.05.2011 - Rev. 4

MOLDED GRATINGS

Mesh	mm 38 x 38	
Thickness	mm 42	
Cover thickness	mm 3	
Bearing bar thickness	mm 7 upper part	
	mm 5 bottom part	
Color	Black	

Raw materials	Polyester Resin	
	Roving glass fiber + Mat and Woven Fabric type "E"	
	Inorganic fillers without halogens + Carbon black conductive powder	

Resin type	Modulus of elasticity	Ultimate stress
CFR	15000 MPa	250 MPa

Standard panels	
mm 1000 x 2000	
mm 1000 x 3660	
mm 1225 x 3660	
Weight kg/m² 25	
tolerance	± mm 5 panel dimensions ± mm 2 height

Surface	A	Quartz	Antiskid level R13 V4 norm DIN 51130
----------------	---	---------------	---

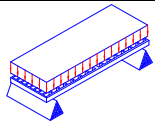

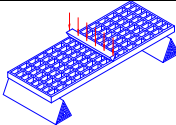

Reaction to fire	Fire retardant	Spread ≤ 25 norm ASTM E84-98
		ASTM D635 Elapsed time and burned length < 25 mm

Surface and Volume electrical resistivity. Dielectric strength	Excellent Conductivity	EN 61340-2.3 Par. 8.1 and 8.2 – IEC 61340-4.1 Par. 5.1.2 ref. ISO 1957 – IEC 61340-4.5 - ASTM D149-97a
---	-------------------------------	---

LOADS

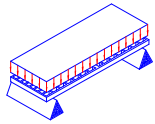

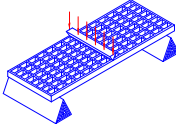

MAXIMUM SUGGESTED LOADS

Type of support	On the line of the two ends of the panel
Limits determined by	Deflection (load sagging)
the maximum deflection admitted , is 1/200 of the distance between the supports	
According to the standard DIN 24537-3 deviation due to the load may be no more than 1/200 of the land width and the difference in height between neighbouring joints between loaded and unloaded floor coverings may be no more than 4 mm.	

DISTIBUTED LOAD			CONCENTRATED LOAD			
	Distance between supports [cm]	Load with deflection equal to 1/200 [kg/m ²]		Load with deflection equal to 1/100	Distance between supports [cm]	Load with deflection equal to 1/200 [kg/m ²]
	50	7900	15800	50	2450	4900
	70	2850	5750	70	1250	2500
	90	1350	2700	90	750	1500
	110	700	1450	110	500	1000

All lighter loads are admitted

Limits determined by	Admitted stresses (stress determined by the load)
the maximum admitted stress is 1/5 of the ultimate stress (safety factor is equal to 0.20 – the ultimate stress is 5 times the specified load)	

DISTIBUTED LOAD			CONCENTRATED LOAD		
	Distance between supports [cm]	Maximum admitted load [kg/m ²]		Distance between supports [cm]	Maximum admitted load [kg/m ²]
	50	10400	50	2600	
	70	5300	70	1850	
	90	3200	90	1400	
	110	2100	110	1150	

All lighter loads are admitted

- The above characteristics are meant as reference values for standard material in ambient working temperature. Even if they are not to be considered as guaranteed characteristics they are based on our experience and are supplied in good faith.
- According to the standard DIN 24537-3 the conversion safety factor should be 0.75 for internal environmental exposure conditions, 0.65 for external exposure conditions, and 0.50 for aggressive exposure conditions.
- No matter which are the exposure conditions, chemical resistance must be always verified by contacting M.M.technical department.
- In case of heavy duty load compressive strength must be verified.
