53C01500458 ISO CE-F

TYPE: PROFILE "C" GROUP CE-F MARKING Marked CE

RESIN: isophthalic resin ISO
REINFORCEMENT: Roving glass fiber type "E" - Continuous strand mat
- Polyester surface veil
PRODUCTION TECHNOLOGY: pultrusion
NORM: EN 13706 -2

The product can be used in humidity range 0-100% and temperature range -30 °C / + 50 °C, in case of different environmental conditions or contact with aggressive chemicals (acids and alkalis), please contact M.M. Technical Department.

The estimated service life is 50 years, on condition that packing, transport, storage, use and installation, maintenance and repairing are carried out properly. Indications about service life must not be intended as product warranty provided by the manufacturer, but shall be considered as guidelines to help the selection of the correct products in relationship with the

service life foreseen for the main works, under reasonable economical criteria.

ATTENTION: The average values reported in the table shall not be considered as minimum values for material acceptance. For strength verifications the Characteristic Values as defined and required by the Standards in force shall be considered. It is highly recommended to pay extra care to the local and global stability checks of profiles. Please refer to "Design Guidelines". For clarifications please contact M.M. Technical Department.

DESIGN GUIDELINES

1. For a correct design of FRP structures, we recommend to pay particular attention to the local and global buckling of the profiles. Contact M.M.'s technical department for further assistance.
2. Avoid to apply tensile/compressive concentrated loads on the flanges of the profiles as illustrated in the below drawings.

3. It is highly recommended to pay extra care to the local and global stability checks of profiles. Please refer to addendum "Design Guideline".
