

FOUNTAIN FLOORING

LOCATION

Theme Park on the Adriatic coast with a total surface of 110 square kilometres, divided into different areas dedicated to the sea, the earth and the sky. The overseas activity is not only focused on fun but also on the safeguard of the environmental heritage and special attention is devoted to the coasts of the Adriatic area on which the park is located.

CLIENT

Company managing the activities of the park, which receives over 1 million people every year.

LOCATION	RICCIONE (RN)
USE	FOUNTAIN FLOORING
PRODUCT	SCH 30/28_ ISO GRATINGS

OBJECTIVE

To combine the architectural effect of innovative materials with the natural characteristics of the park and the need for minimum maintenance and maximum safety in the applications.

SOLUTION

M.M. proposed and successfully installed the SCH 30/28_ISO open mesh gratings in polyester resin and fibreglass, certified as durable products and not subject to a decline in mechanical performance according to the UNI EN ISO 9142/04 standard and AVS requirements. Open mesh gratings were selected to give the fountain an innovative look. M.M. gratings were also used for all technical installations within the park, requiring resistance to marine agents and an appropriate level of safety. The quartz grains treatment was applied on the surface to make it slip resistant and ensure high adhesion even under wet surface conditions, according to the DIN 51130 standard (R13 V10 level).
