

STAND FLOOR

LOCATION

Exhibition stand in FuoriSalone - Milan.

CLIENT

Exhibition stand assembling company.

LOCATION MILAN

USE FLOOR

PRODUCT TRANSLUCID SCH52/40 _ ISO

OBJECTIVE

An American architectural firm has got in touch with M.M. because seeking a product for a stand floor that would allow the passage of air and light for a company inspired to sustainable development.

Considering the large number of visitors' passages, the floor had to guarantee a load bearing capacity of 400 kg/m².

SOLUTION

M.M. had sent some grating samples to an American architectural firm that was seeking a product for an exhibition stand floor.

The gratings were made with translucent isophthalic resin and they've been appreciated because of the penetrability of air and light which was the focal point that characterized the project.

Moreover even if they had had a reduced thickness they however fulfilled the mechanical resistance required.

The product was included in the technical specifications and supplied tailor-made to the stand tender winning company.
